DETAILED ACTION

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-5,7-10 and 14-20, are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter

Claims 1-5,7-10 and 1-17 are directed to inventions that merely perform calculations and manipulations of data according to a mathematical algorithm for determining a similarity between two data strings. In order for such a claimed invention that merely performs calculations and manipulations of data to be patent-eligible under § 101, the claimed invention must not cover every substantial practical application. See *State Street* 47 USPQ2d, *Benson* 175 USPQ , and “Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility”, OG Notices: 22 November 2005. It is clear from claims 1-5,7-10 and 1-17 that the claimed invention is directed to calculations and manipulations of data, but fails to limit the calculations and manipulations of data to any practical applications or to be implemented by any specific device. The mere recitation of “an electronic device” in the claims is not drawn to any specific device since it cover every substantial device used to implement the claimed calculation and manipulation of data. Therefore, claims 1-5,7-10 and 1-17 clearly to cover every substantial practical application, and thus is directed to a non statutory subject matter as being directed to a preemption of calculations and manipulations of data.

Further, for a claimed process to be patent-eligible under § 101, the claimed process must

Art Unit: 2193

also (1) be tied to a particular machine or apparatus that impose meaningful limits on the claim's scope to impart patent-eligibility, or (2) transform a particular article into a different state or thing. (See *Diamond v. Diehr*, 450 U.S. 175, 184 (1981); *Parker v. Flook*, 437 U.S. 584, 588 n.9 (1978); *Gottschalk v. Benson*, 409 U.S. 63, 70 (1972); *Cochrane v. Deener*, 94 U.S. 780, 787-88 (1876), and in *Bilski*). However, it is clear from claims 1-5, 7-10 and 16-20 that the claimed method does not transform a subject matter such as an article or material to a different state or thing. Further, the claims are now amended to recite the method performed by "an electronic device". However, a general recitation of "an electronic device" in the claims does not draw to any particular machine or apparatus, and thus fails to tie the claimed method to a particular machine or apparatus that imposes meaningful limits on the claim's scope. Therefore, the method of claims 1-5, 7-10 and 16-20 fails to meet the machine-or transform test, and thus is directed to a nonstatutory process.

3. Applicant's arguments filed 05/08/2009 have been fully considered but they are not persuasive because the claims are directed to a preemption of calculations and manipulations of data, and the claimed method does not transform a particular article into a different state or tie to a particular machine or apparatus that impose meaningful limits on the claim's scope.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Art Unit: 2193

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
